SAIC Turbo abrasives are our value for money product developed exclusively for wooden floors.

Semi-open coating ensures flexibility of usage on both soft and hardwood flooring preventing clogging whilst enhancing the durability of the abrasive.

A rich zirconia mix means that the papers cut faster and more efficiently allowing you to achieve fantastic results. An optimised price-performance ratio ensures you get the most value for money.

Our Turbo Extreme is a high quality material, with a sharp and aggressive zirconia grain and durable backing for extended service life.

With a much higher zirconia content than the offerings of many competitors' products, Turbo Extreme belts and discs are a highly popular heavy-duty solution that can provide up to 2-3 times the life of standard zirconia products on the market whilst also providing a consistent finish throughout.

SAIC Nitro Extreme abrasives are our market leading cutting edge abrasive sure to work wonders on the job.

Ceramic and heat treated semi-friable grain mixture give a great support to the durability of the ceramic grains. Closed coating further enhances durability.

Strong phenolic resin/resin formula is filled with heat dissipating active fillers that when paired with the self-sharpening technology it ensures great durability and performance with a scratch free surface.

Our silicon carbide is best suited for use on surfaces including parquet, wood, hardwood, stone, marble and granite.

Our Silicon Carbide belts and discs are made of a strong poly-cotton cloth for floor sanding, with a resin over resin bonding.

The silicon carbide works well on soft surfaces and is resin coated for dimensional stability. It has semi-open coated coarse grains to prevent clogging.

A popular choice in the floor sanding industry, the hybrid cloth strength holds coarse grains.

Preferred maximum conversion width 200mm and minimum width is 100mm.

Excellent for floor cleaning.
